Stock Range:	15-40
Sector Range:	0-40% in any sector (GICS 2)
Country Range:	0-35% in any country
Cash Range:	0-10%

Sector Allocation (%):

Country Allocation (%):

Investment Philosophy

Northcape adopts a long-term approach to investing and believes that superior investment returns rely on fundamental research, good judgement and the experience of our investment team.

We believe that the most effective way to generate superior returns, given risk in emerging markets, is through a concentrated portfolio of no more than 40 high quality businesses invested over an average time frame of three or more years. We are very patient investors with low portfolio turnover.

Investors generally believe that emerging markets stand for “higher growth with higher risk”, and there is a tendency to think of it as a single homogenous category. However we believe that the reality is different; there are vast differences between countries, sectors and companies. Further the composition of the index is highly inefficient in EM, with SOEs (which by-and-large are not run exclusively for shareholders) and companies in unattractive cyclical industries forming a significant part of the

benchmark. In our view this justifies a highly selective equity investment strategy for EM, which takes account of these unique differences in order to maximise returns, whilst minimising volatility and capital risks.

Northcape believes that markets generally still underestimate the value of good ESG, capital adequacy and assessment of sovereign risks in EM – key factors that support downside protection. As such, we invest in companies where stakeholder interests are best aligned and exemplary ESG is coveted. In this way the prospects of building real wealth over the long-term in emerging markets is materially improved, by limiting downside risks, whilst capturing steady growth.

Investment Process

The investment process for the Northcape Global Emerging Markets equity fund combines deep fundamental stock and sector research with analysis of sovereign and market risks. We have an extensive EM travel program focused on the most prospective investment opportunities and assessing the macro risks in the key markets. ESG factors are considered as an important part of the research process. A **diagram of our investment process** is provided below, with further detail over the page.

Investment Process

Opportunity Screening

Rigorous in-house research is the basis of our investment process. We filter the investment universe on a preliminary basis for companies with strong balance sheets, high returns on capital and are addressing large, growing markets. We use a few different systems to assist in filtering the potential investment universe such as Bloomberg and HOLT®.

There are no rules or constraints placed on the analyst and his/her research methodology. The primary focus is to identify quality businesses that offer above average growth prospects and high rates of return on equity over the long term. As a team we have an extensive travel budget which is used to meet with company management, industry experts, government representatives and central bankers around the world. We typically have up to 400 research meetings a year. We believe that only by visiting companies in their home market can we build the knowledge required to create a concentrated portfolio of the best names in the EM space.

In-house Research

Each analyst decides which stocks to undertake work on. The analyst must first complete an ESG assessment of the company. The ESG assessment is presented to the EM team where discussion and debate is encouraged. The company must attain a score of 6 out of 10 in order to pass the Northcape ESG test. Companies with potentially poor ESG do not warrant further investigation. If the company passes the ESG test, the analyst will then present a detailed research paper to the EM team to get a stock onto the Approved List.

The research process for a new stock can take several months, sometimes years. One of the most important aspects of our process is to hand select high quality, well capitalised, resilient businesses with clear opportunities for growth and avoid companies that are financially geared, structurally challenged or have poor ESG.

Approved List

A unanimous agreement is required for approval. Our EM Approved List is dynamic, and reflects our selection of the most attractive businesses in the EM space regardless of pricing. Stocks must be approved before they can be considered for inclusion in the portfolio.

The culmination of our top-down analysis and our bottom-up

fundamental research is our EM Approved List of up to 90 companies. These are the highest quality businesses we can find across the entire EM space. There is regular review of the stocks on the EM Approved list. This reinforces the peer review approach, broadens knowledge through collective learning and, requires us to monitor the market for new information and views.

Sovereign Risk

From a top down perspective, we complete a detailed sovereign risk analysis to determine a country risk factor or discount rate for each EM country. Our analysis includes both qualitative factors (corporate governance standards, securities legislation, investor protection etc.) and quantitative factors. We prepare a country update following a visit to any given EM jurisdiction. Our view on the relative risk/return characteristics of different sovereigns is incorporated into our individual company valuation through a discount (or "hurdle") rate for each country. These discount rates are dynamic and we are constantly updating our views on the countries we invest in (and hence our country discount factors).

Client EM Portfolio

From the EM Approved list, a concentrated portfolio of up to 40 stocks is constructed. These stocks are picked because they are trading at the greatest discount to our assessed "fundamental" value.

At Northcape we use a multiple portfolio manager approach as we believe this is the optimal structure for experienced portfolio managers to focus on their best investment ideas. Under this approach the timing of decisions and portfolio weightings is delegated to individual portfolio managers who are responsible for managing a segment of the overall portfolio. Each portfolio manager has ultimate accountability for ensuring that their highest conviction ideas are included in their slice of the portfolio. Portfolio managers are completely free, within the strict constraints of the client mandates and the EM Approved List, to exercise their investment skills to the maximum. There are no committee decisions in this phase.

We do not set portfolio weightings relative to the composition of the EM index and our country and sector exposures are an outcome of our portfolio construction process.
